The Smart Choice.

The future looks dry.™

Dri-Sate™ Dry Acid

CONCENTRATE MIX SYSTEM Patent Pending

INNOVATION PRODUCES SUPERIOR PRODUCTS

Dri-Sate™ Dry Acid Concentrate Mix System eliminates 55 gallon drums and increases your storage space. It's a compact, automated mixing system that saves valuable employee time and turns weekly supply deliveries into monthly supply deliveries.

ROCKWELL

MEDICAL TECHNOLOGIES, INC.

"We chose Rockwell's Dri-Sate™ Dry Acid System for all our clinics because it's the best. It mixes quickly and is 100% accurate. The case packaging is light-weight, it offers bath formulations for all machine types and the mixer's compact size allows easy installation through standard doorways. Best of all, less deliveries and no more drums."

*Greg Crabtree, Area Technical Manager
West Florida Dialysis Clinics*

"Bottom line...all of our clinics use the Dri-Sate™ System because it saves money. By eliminating the 55 gallon drum we've eliminated the cost of pumping our own drums and we've recovered previously wasted acid which was left in the bottom of each drum after the pump-off. We have ten clinics using Dri-Sate™ and when you add up our savings the number is huge."

*Michael Williams, Technical Coordinator
Tennessee Kidney Clinics*

"Dri-Sate™ is a great product. We use to store 13 drums every week but now we store the equivalent of 114 drums in the same space with only one delivery a month. It has absolute consistency, it saves time and expense and it mixes quicker than our bicarbonate. Why pay to ship water?"

*Tim Cox, Operations Manager
Cedar Valley Dialysis*

"We chose the Dri-Sate™ System because Dri-Sate™ is so simple to use. It also takes up very little space, it mixes very fast and it prevents us from running out of dialysate. Most importantly, it's eliminated our 55 gallon drums which has given us more storage space and reduced our delivery frequency."

*Henry Collins, Chief Technician,
PA Dialysis of Reading*

"We have the Dri-Sate™ System operating in 19 facilities and appreciate the increased storage space achieved through the elimination of 55 gallon drums, plus the benefit of decreased order and delivery frequency."

*Cary Goldsmith, National Director
Technical Services, Renex Corp.*
